EDUCATION

Stony Brook University <i>Master of Science in Computer Science (Concentration in Data Science)</i>	Stony Brook, NY Aug. 2024 – May 2026
Savitribai Phule Pune University <i>Bachelor of Technology in Computer Science</i>	Pune, India Aug. 2020 – May 2024

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C/C++, SQL, Swift
Generative AI: LLMs (GPT-4o, LLaMA2-7B, Mistral-7B), LangChain, HuggingFace, PyTorch, TensorFlow, RAG, Fine-tuning
Frameworks: Django, Spring Boot, Pandas, Flask, ReactJS, SwiftUI, Node.js
Tools and Technologies: AWS, Google Cloud, Git, Docker, Kubernetes, Terraform, Jenkins, Spinnaker
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Firestore

EXPERIENCE

Software Engineering Intern <i>SculptSoft LLC.</i>	May 2025 – Aug. 2025 San Francisco, CA
Developed an AWS Kinesis-based real-time ETL pipeline processing 50,000+ events per minute, integrating schema standardization, cleansing, and transformation logic; built a rule engine executing 80+ business rules to detect anomalies, violations, and generate detailed operational reports.	
Software Engineering Intern <i>JPMorgan Chase & Co.</i>	Jan. 2024 – Jun. 2024 Mumbai, India
- Designed and implemented ETL pipelines to process over 20GB of data daily from 85+ sources, resulting in \$150K+ annual cost savings by decommissioning legacy workflows. - Engineered the backend architecture for a novel data correction tool employing Spring Boot and Aurora PostgreSQL on AWS ECS. - Resolved security vulnerabilities using Raven, increased test coverage to 95+%, and automated infrastructure with Terraform and CI/CD via Jenkins and Spinnaker, achieving a 50% faster deployment cycle.	
Software Engineering Intern <i>JPMorgan Chase & Co.</i>	Jun. 2023 – Jul. 2023 Bangalore, India
- Developed an end-to-end system by fine-tuning a BERT model to identify data compliance violations, insider trading, and information leaks by employees. - Achieved 92% accuracy using transfer learning on unlabelled email and chat data. - Developed a compliance dashboard using Dash to identify and visualize inter-employee violation patterns; adopted as a prototype for compliance regulations.	

PROJECTS

Mobile Application Permission Prediction System <i>Python, Transformers, LLMs, LangChain</i>	
Built an NLP-based multi-label permission prediction pipeline using HuggingFace Transformers, DistilBERT, DeBERTa on 5,400+ Android apps; evaluated LLMs (GPT-4o, LLaMA2-7B, Mistral-7B) and analyzed class imbalance and error patterns across permission categories.	
Wrist Jockey: Control Music from Your Wrist <i>Swift, SwiftUI, Node.js, CoreMotion, Spotify API</i>	
- Architected a full-stack gesture-recognition system spanning watchOS, iOS, and Node.js, streaming calibrated 6-axis motion data from Apple Watch to enable real-time, on-device gesture classification. - Implemented a Dynamic Time Warping classifier with Barycenter Averaging and adaptive per-gesture thresholds for personalized, noise-robust recognition from few samples; integrated Spotify OAuth 2.0 for real-time playback control.	
Enterprise Innovation Workflow System <i>Python, Django, Tailwind CSS, AWS</i>	
Architected a full-stack idea-management platform for Bridgestone across 4 user roles with automated email workflows, granular RBAC, and secure authentication for enterprise-grade multi-tenant workflow orchestration.
